### 1 Project Summary

HCLI (Habit Tracker CLI) is a command-line-based habit tracking application designed to provide a lightweight and efficient way for users to track their habits. The tool offers features such as habit addition, completion tracking, streak analysis, and analytics visualization. The project has been refined and optimized following multiple phases, ensuring usability, performance, and accuracy.

### 2 Objectives and Implementation

The primary goal of HCLI was to develop a user-friendly and functional habit tracking CLI tool with analytics. Throughout the development:

- Core functionalities such as habit creation, completion tracking, and summary analysis were implemented.
- JSON-based data storage was used to provide persistent tracking.
- A command-driven interface was built using Python's Typer and Rich libraries.
- Advanced analytics features such as streak tracking and visual dashboards were integrated.
- The tool was rigorously tested using Pytest to ensure accuracy and stability.

### 3 Challenges and Lessons Learned

Throughout the development and refinement of HCLI, several challenges were encountered:

- Ensuring data persistence and integrity across different executions.
- Implementing a robust configuration system that allows users to define storage paths.
- Managing user input and error handling effectively to provide a smooth experience.
- Refining the testing process to eliminate redundancy and improve test coverage.

These challenges led to important insights about software design, modularization, and efficient debugging practices.

## 4 Final Submission Details

To finalize the project, the following steps were taken:

- The final version of HCLI was hosted on GitHub, ensuring accessibility and version control.
- All project files, including source code, documentation, and test scripts, were compiled into a ZIP file for submission.
- The project was tested extensively to validate its functionalities and ensure stability.
- A comprehensive README file was included to guide users on installation and usage.

## 5 Reflection

The development of HCLI has been an insightful journey, allowing for hands-on experience in CLI development, data management, and software testing. The project effectively meets its original objectives, though certain refinements and additional features could be implemented in future iterations, such as:

- Adding a graphical user interface (GUI) for enhanced usability.
- Expanding the analytics module with more detailed insights.
- Implementing cloud-based data storage for cross-device accessibility.

Overall, the experience has reinforced the importance of structured development, iterative testing, and user-focused design.
